

# LEIDOS PARTNERSHIP FOR DEFENSE HEALTH

*Trusted Innovators, Mission-Focused, Patient-Centric*

## WHO WE ARE

Our team includes health IT experts from Leidos, Cerner, Accenture, Henry Schein, and 31 other leading companies. We are industry leaders in military and Veterans Affairs (VA) health systems, health data security and global electronic health record (EHR) implementations. We offer a best-of-suite, interoperable and integrated EHR capability.

**#1  
Health  
Information  
Exchange<sup>1</sup>**

**25+ years  
as a trusted  
partner to the  
Departments of  
Defense and VA**

**Global leader  
in change  
management  
for healthcare  
solutions**

**Largest  
deployed,  
ONC-certified  
dental EHR  
on the market**

## COMMITTED TO ENHANCING MILITARY HEALTH TODAY AND FOR YEARS TO COME

The men and women of the U.S. Armed Forces, their families and beneficiaries deserve the very best healthcare solutions. The Military Health System must provide clinicians the most complete patient health information available – wherever and whenever it’s needed – so that our service members can receive the best informed care inside or outside the DoD and VA systems. We are committed to the mission priorities of the Defense Health Agency and the DoD to help clinicians deliver the best care possible.

## WHY THE LEIDOS PARTNERSHIP?

**Mission-focused:** The Leidos Partnership for Defense Health is a team of proven innovators that have consistently delivered large, complex health solution programs for the DoD and VA on time and within budget for nearly three decades. We specialize in delivering patient- and clinician-centric tools, training and change management support to offer a comprehensive and high-quality healthcare technology.

**Global Leadership in Interoperability:** Cerner’s best-of-suite EHR solution is an open platform deployed at more than 18,000 sites worldwide, with 80 percent of its connections to non-Cerner systems. Cerner helped co-found CommonWell Health Alliance® in 2013. Today, its members provide EHRs to 70% of the acute care market.<sup>2</sup>

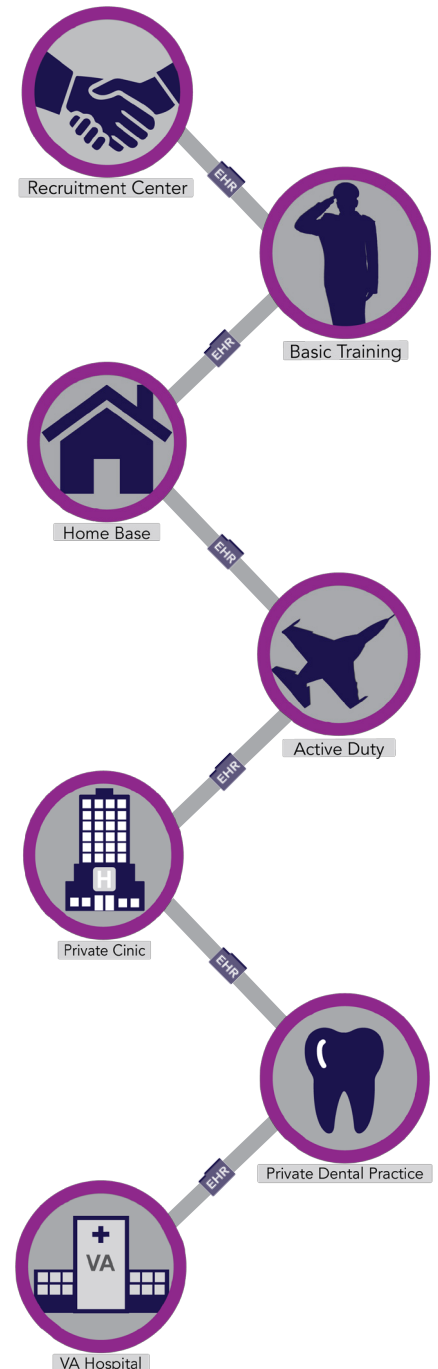

**Focus on Outcomes:** The integration of Cerner’s and Henry Schein’s systems allows for seamless medical and dental record sharing, including allergy and medication information. Secure, immediate access to such critical health data enhances clinical decision-making and can improve patient outcomes.

**Harnessing data to optimize care:** Cerner’s innovative technology and use of cutting-edge data analytics is saving lives and improving patient outcomes daily.

**Focus on Outcomes:** Cerner’s predictive health models helped save nearly 2,000 lives and \$30 million in sepsis-related medical expenses in one hospital alone.

## WELL-INFORMED MEDICAL CARE – WHEREVER, WHENEVER

Our military’s EHR must be able to share meaningful data across platforms. No matter where a service member or Veteran needs care, the patient’s health information should follow.
